

WATERLOO EXTENSION PROJECT UPDATE

Why is Waterloo being extended? Can I provide feedback?

The location of the Waterloo Wind Farm is ideal for generating high volumes of energy from natural wind resources present in the region.

Additional turbines at Waterloo were always envisaged as a part of the original development project.

Now, after five years of solid performance from the wind farm, we will build additional turbines to increase the amount of clean energy the wind farm can produce.

By adding to the existing wind farm – and using infrastructure already in place – we will gain more clean energy with less impact on the community and the environment.

Who is managing this project?

Construction of the Waterloo Wind Farm extension will be managed by a specialist team with support from EnergyAustralia staff.

Palisade and Northleaf Capital, Waterloo's joint-owners, will fund the \$43 million construction project.

During construction, the existing wind farm will continue to be run by the staff onsite who will also be available to respond to queries from the community.

Yes. Community consultation plays an important role in helping us manage our wind farm and allows us to keep neighbours and residents updated with relevant information.

Contact us by phone or email (details below) or consider becoming a member of the Waterloo Wind Farm Community Liaison Group. For a nomination form, visit www.waterloowindfarm.com.au

How do I find out more?

Project information and detailed FAQs are available on the web at www.waterloowindfarm.com.au

Have a question?
